

Loyalty Growth & Campaign Analytics

Independent portfolio case study

Business question

How can a loyalty program improve member acquisition and engagement through targeted campaigns and strategic partner collaborations?

01. Business context

Understanding the loyalty ecosystem before analysing the numbers

Program context

BluChip is positioned around earning and redeeming benefits across eligible IndiGo activity and selected partners.

Member experience

The program includes tier-based benefits linked to flight activity, direct booking channels and selected 6E add-ons.

Partner ecosystem

Relevant categories include banking, everyday spend, retail, food, stays, airport services and travel experiences.

Why this matters

Loyalty growth is a mix of acquisition, engagement, campaign performance and partner value.

02. The problem to solve

A focused business question and a clear measurement framework

Objective

Identify practical levers to increase new member acquisition and improve engagement among existing members.

Focus

Acquisition channels, customer segments, campaign performance and partner contribution.

Success metrics

Member volume, engagement, conversion, revenue impact and partner activity.

Deliverable

An Excel MIS dashboard plus practical, data-backed recommendations.

03. Methodology & data

A transparent approach designed for a portfolio case study

1

Research the public context

Reviewed publicly available program and partner information.

2

Create a simulated dataset

Built 1,000 member records because internal customer data is not public.

3

Define the KPIs

Included acquisition, engagement, conversion, spend, revenue impact and partner activity.

4

Turn analysis into action

Used patterns in the simulated data to develop recommendations.

Important: all customer-level numbers and performance results are simulated and are not IndiGo internal data.

04. Dashboard snapshot

Key outputs from the simulated case-study dataset

Three takeaways

ROI

Estimated ROI: 1144.7%

ACQUISITION

Highest member volume: IndiGo Website

CAMPAIGN

Highest estimated impact: Fly More, Earn More

05. Customer & channel insights

Measure acquisition quality, not just acquisition volume

Members acquired

Recommendation Track each source through activation, repeat activity and partner engagement instead of reporting only sign-ups.

06. Campaign insights

A campaign should be measured as a funnel

Fly More, Earn More	50.6% engaged	30.7% converted	₹206,966 impact
App Activation	61.2% engaged	29.8% converted	₹200,097 impact
Partner Weekends	43.6% engaged	18.8% converted	₹172,640 impact
Welcome to BluChip	40.4% engaged	24.7% converted	₹170,242 impact

Reached → Engaged → Converted → Revenue
impact

Recommendation: reuse strong campaign mechanics, but tailor offers to member behaviour instead of sending one generic offer to everyone.

07. Partner ecosystem opportunity

Partners can support different moments in the member journey

Banking & cards

Acquire

Support high-value acquisition and recurring earn behaviour.

Everyday spend

Engage

Create useful touchpoints between flight purchases.

Travel & stays

Extend

Support an end-to-end travel journey and cross-category value.

Airport & retail

Activate

Reach members at moments of high travel intent.

Key idea

Evaluate partner value by the behaviour it creates, not only by the number of transactions it generates.

08. Customer segment insights

Different segments create different value and need different journeys

SEGMENT	MEMBERS	AVG. SPEND	REVENUE IMPACT
Frequent Business	215	₹20,126	₹233,856
Family Traveler	219	₹14,588	₹156,650
Young Professional	234	₹14,626	₹152,489
Leisure Traveler	238	₹14,508	₹147,105
Student / First Jobber	94	₹14,130	₹59,845

Interpretation Frequent Business is the top simulated segment by revenue impact, supporting a differentiated journey strategy.

09. Recommended loyalty campaign

One concept, three audience journeys

Fly More, Earn More + Partner Weekends

A combined campaign designed to move members from first activity to repeat engagement.

New members Onboard & activate

First-flight activation and clear early-value messaging.

Infrequent members Re-engage

Partner-funded earn opportunities and limited-time boosters.

High-value travellers Progress & retain

Tier progression and premium travel benefits.

Measure

Acquisition • Activation • Engagement • Conversion • Incremental spend • Partner transaction rate

10. Proposed MIS framework

A simple reporting cadence that connects data to decisions

Decision rule

Scale campaigns and partnerships that create incremental engagement and profitable member behaviour.

11. Key recommendations

Five practical actions from the case study

- | | | |
|----|---|--|
| 01 | Measure beyond sign-ups | Track activation and conversion by acquisition source. |
| 02 | Segment the audience | Personalise offers and reduce generic campaign communication. |
| 03 | Use partners between trips | Create relevant everyday-spend engagement opportunities. |
| 04 | Create joint scorecards | Track customer and commercial outcomes with partners. |
| 05 | Strengthen direct digital journeys | Prioritise journeys that improve activation and repeat engagement. |

12. Skills demonstrated

What this project was designed to show

Loyalty research

Program and ecosystem understanding

Partner analysis

Category and journey-based thinking

Customer segmentation

Different audiences, different strategies

Campaign analysis

Funnel and performance evaluation

Excel MIS reporting

KPI tracking and dashboard thinking

Business recommendations

Turning analysis into practical actions

The value of the project is the approach: research → analyse → report → recommend.

13. Sources & transparency

Keeping the case study credible and easy to verify

Public program context

- IndiGo BluChip official loyalty program page
- IndiGo BluChip FAQs and tier benefits
- IndiGo BluChip official partner ecosystem page
- Official IndiGo announcements on Single.id, ALL Accor and other BluChip partnerships

Transparency statement

All analysis data in this portfolio project is simulated. The case study does not use or claim access to confidential IndiGo data.
