For reliable mobile viewing, use this PDF summary. The editable Excel workbook remains available separately for detailed exploration.

Methodology & Portfolio Notes

1. Research the public context	Reviewed publicly available information to understand loyalty program concepts, member journeys, and partner ecosystems.
2. Create a simulated dataset	Built a simulated member-level dataset because internal airline customer data is not publicly available.
3. Define practical KPIs	Included acquisition, engagement, conversion, campaign performance, partner activity, and estimated revenue impact.
4. Analyse and interpret	Used Excel-based analysis to identify patterns and create structured recommendations.

Portfolio Integrity

All customer-level records, performance values, and estimated revenue figures in this portfolio are simulated for demonstration purposes. The case study is an independent learning project and is not affiliated with or based on confidential IndiGo data.

How to Use the Files

Mobile viewing	Use this PDF summary and the presentation PDF for the most reliable layout.
Editable analysis	Use the XLSX workbook in Microsoft Excel or a compatible spreadsheet application, ideally on desktop for detailed exploration.
Presentation	Use the PPTX file for editing and presenting. A PDF version is provided for reliable viewing on phones and browsers.
